

ANNOUNCING INTERGATE.QUINCY

Sabey Corporation's newest data center

Sabey Corporation is making plans for Intergate.Quincy, a new data center campus and a sister to the fully leased Intergate.Columbia, completed in 2008 in East Wenatchee. Groundbreaking is expected in the summer of 2009.

With 525,000 square feet comprising three facilities on forty acres just north of Quincy WA, Intergate.Quincy is the definitive solution for both energy-conscious enterprise-level customers and colocation data center operations that prefer the ease of leasing rather than owning their facilities. Low power rates keep costs down and the area's dry, moderate temperatures encourage energy-saving techniques such as evaporative cooling.

And Intergate.Quincy is environmentally friendly. In a region famous for its green profile, the abundant hydro-power running Intergate.Quincy will generate virtually no carbon footprint. Beyond green, efficient energy, the hydro dams' output is carefully managed to protect salmon.

Like Intergate.Columbia pictured at left, Intergate.Quincy will stimulate new, environmentally clean economic development opportunity in the region.
